Le département est parfaitement

Deux formations définissent le département :

```
<!--

```

à l'Ouest les alluvions, à l'Est les massifs et bassins calcaires. Les zones calcaires fortement plissées présentent de vraies montagnes escarpées. Barres rocheuses et bassins alternent, créant également sur la côte une agréable diversité : promontoires rocheux surplombant la mer et vallées faisant face à de grandes baies. Si, après la zone doucement vallonnée du Pays d'Aix, on retrouve une certaine continuité de relief avec la chaîne des Alpilles, la partie occidentale du département est essentiellement un espace de plaines : les plaines subcomtadines au Nord des Alpilles, au Sud des Alpilles, la Crau, vastes champs de galets, delta fossile de la Durance, la Camargue, plaine à fleur d'eau aux grandes plages de sable fin.
